

## Voodoo windshield Instructions

For: Voodoo KRX, Voodoo Pro

IMPORTANT: Please read through all instructions before installing. Thank you.

Hardware:

- 4x - 1.75" Billet Clamps Blk
- 4x - 1/4-20 x 2" Hex Bolts Blk
- 4x - 1/4-20 x 1/2" Bolts Blk
- 8x - Split Lock Washers
- 8x - Flat Washers
- 50" - Adhesive Foam

**Step 1:** Loosen the front of the roof to allow room to slide the windshield under. Longer fasteners may be required for the roof after the windshield is installed.

**Step 2:** Put the 4 billet clamps in approximate locations on the cage. The openings of the clamps point toward the middle of the machine with the raised edge facing forward (*Shown in picture*). Use the hex bolts with a split lock washer and flat washer to hold the clamp in place.

**Step 3:** Using 2 people put the windshield on the machine. Bolt the windshield into the clamps with the 1/2" bolts and both types of washers. Once in place tighten all the bolts.

**Step 4:** Place the adhesive foam on the top of the windshield where the roof rests on the windshield to prevent rattling. Depending on the windshield you may not use all of the foam. The red line is the approximate location of foam (this picture may not be the same windshield you have).
